

10 Questions To Ask Your Property Inspector

1. Do you have formal training as an Inspector?
2. Are you a member of a professional Inspectors' association such as ASHI®?
3. How long have you been performing property inspections?
4. Do you perform property inspections on a full-time basis?
5. Do you produce a narrative or a checklist report?
6. Will you provide me with references?
7. When will I receive my report?
8. What is your construction experience?
9. Is radon gas or mold testing available?
10. May I attend the inspection along with my Realtor®?

Jeffrey A. Hockersmith Inspector

Celebrating 23 Years of Property Inspection in Northern New Mexico

One of the most important qualities in an Inspector is experience. Jeffrey Hockersmith has performed over 6000 inspections of commercial, industrial, and

residential properties since 1982. A Santa Fe resident since 1965, Jeff has been actively involved in the construction industry since 1978, working both as a Superintendent and General Contractor prior to founding HAWK INSPECTIONS. As one of the founding members of the New Mexico ASHI® Chapter, Jeff stays highly involved in Continuing Education for himself, other ASHI® members, and members of the community.

At HAWK INSPECTIONS we use an informative, narrative style report, rather than a sparse checklist. The report itself is generally over 20 pages long and is provided with an executive summary denoting any issues of immediate concern. Both segments are computer generated, which allows us to make our reports available via email. Reports are completed within one to two business days after the inspection is complete.

Many people have become aware of potential environmental hazards which may be present in structures, such as radon gas and mold. We can perform testing for both radon gas and mold using state-of-the-art equipment and techniques.

It is a conflict of interest for an inspector to perform repair work on a building he or she inspects, in accordance with the ASHI® Code of Ethics. In many cases, the Inspector can assist by recommending remedial courses of action.

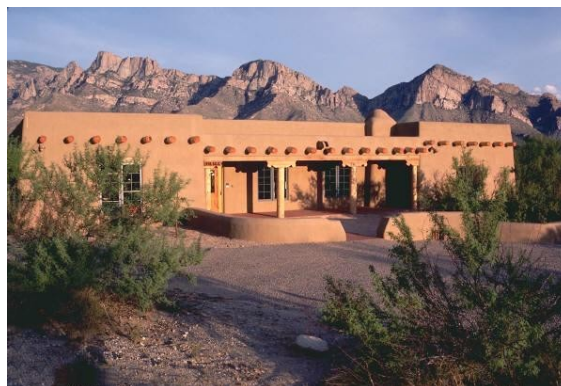

We encourage our clients to be present for the last segment of the inspection for a client orientation walkthrough.

"Buying property is stressful for all parties. Our firm has performed many thousands of property inspections; we believe that we are singularly and uniquely qualified for this demanding profession." - Jeffrey Hockersmith

Services Available for Commercial Industrial, and Residential Buildings

- Pre-Purchase & Pre-Listing Residential & Commercial Property Inspections
- Construction & Progress Inspections and Consultation
- Expert Legal Witness
- Environmental Assessment & Testing
- Dispute Resolution
- Short-term Continuous Radon Monitoring
- Mold Testing

The Importance of ASHI® CERTIFICATION

All American Society of Home Inspectors (ASHI®) members are required to pass a series of examinations to become certified. A prerequisite of 250 fee paid inspections is required before application. Additionally, 20 hours of continuing education are required each year to maintain membership. ASHI® is recognized world wide as the premier organization of its kind.

An ASHI® property inspection is a visual examination of the major components of the building. The inspection is a reasonable, unbiased effort to disclose the conditions existing at the time of the inspection. The Inspector will examine over 327 items, including:

- Roof
- Flashings
- Grading
- Patio
- Garage
- Decks
- Doors
- Windows
- Plumbing
- Electric
- Framing
- Attic
- Gutters
- Chimneys
- Drainage
- Sidewalk
- Coatings
- Trim
- Walls
- Ceilings
- Heating
- Appliances
- Insulation
- Basement
- Downspouts
- Fireplaces
- Foundation
- Driveways
- Masonry
- Porches
- Floors
- Cabinets
- Cooling
- Fixtures
- Ventilation
- Crawlspace
